Centrifugal Fan

Description:

- Centrifugal fans are used in extraction, cooling, ventilation and air pollution control systems
- Our fans have forward and backward curved blades, single and double inlet, with or without housing, ideal for general extraction and cabinet cooling applications. Additional dampers, silencers and speed controllers can be fitted on them.

Features:

- Straight blade fans have simple construction, suitable for material handling
- Forward blade fans, blades curve same with axial rotating, achieving higher pressure.
- Backward blade fans, blades curve against axial rotating, achieving highest efficiency and lowest noise
- Wide and short blade fans have greater airflow and low pressure; narrow and longer blade fans have low airflow and higher pressure.
